

PROCESS ENGINEER

We are currently looking to recruit a Process Engineer to join our lively team.

In this diverse role, you will be supporting our Sales, Production and Technical teams on a wide range of tasks and special projects. Key tasks will include assisting the Sales team in responding to new customer enquiries and liaising with customers on orders, inputting orders and production data using the company's computerised production system, and assisting our Technical and Quality teams on ad hoc projects.

The person we are looking for will ideally have an engineering background or relevant qualification in an engineering discipline, although this is not essential as you will receive full training. A team player, you must be able to communicate confidently and effectively with customers and suppliers. A systematic and methodical approach is essential, as is a high level of computer literacy.

This is a great opportunity for someone looking to start or further develop their engineering career, and gain experience and training within the engineering industry.

Salary is negotiable, dependent on experience.

To apply please send your CV by 17 March to: Lindsey Braimbridge, HR Administrator, Lestercast Ltd, Investment Casting Centre, Ireton Avenue, Leicester, LE4 9EU or by email to lindseybraimbridge@lestercast.co.uk
